Modern Biology - St. Johns County School District

Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as ...

Biology - Wikipedia

The modern synthesis was the early 20th-century synthesis reconciling Charles Darwin's theory of evolution and Gregor Mendel's ideas on heredity in a joint mathematical framework. Julian Huxley coined the term in his 1942 book, *Evolution: The Modern Synthesis*. The 19th century ideas of natural selection and Mendelian genetics were put together with population genetics, early in the twentieth ...

Animal Physiology - Pearson

This chapter provides guidelines for the environment, housing, and management of laboratory animals used or produced for research, testing, and teaching. These guidelines are applicable across species and are relatively general; additional information should be sought about how to apply them to meet the specific needs of any species, strain, or use (see Appendix A for references).

Thank you for supporting this site! When I started doing research for a novel I am working on, I started keeping notes on books that help me better understand the human brain and human behavior.

Books about the brain, brain anatomy, evolution, and the ...

Dinosaurs are used more than almost anything else to indoctrinate children and adults in the idea of millions of years of earth history. However, the Bible gives us a framework for explaining dinosaurs in terms of thousands of years of history, including the mystery of when they lived and what happened to them. Two key texts are Genesis 1:24-25 and Job 40:15-24.

What Really Happened to the Dinosaurs? | Answers in Genesis

Why is it so difficult for people to accept that dinosaurs and humans once lived together? No doubt one of the reasons is due to the fact that for many years, we have been inundated with information—on television, in books, in classrooms, in movies, in magazines, and on all sorts of paraphernalia—suggesting that dinosaurs and humans are separated by 60+ million years of geologic time.

Apologetics Press - Dinosaurs and Humans—Together?

For these animals, there is documented evidence of homosexual behavior of one or more of the following kinds: sex, courtship, affection, pair bonding, or parenting, as noted in researcher and author Bruce Bagemihl's 1999 book *Biological Exuberance: Animal Homosexuality and Natural Diversity*. Bagemihl writes that the presence of same-sex sexual behavior was not "officially" observed on a large ...

List of animals displaying homosexual behavior - Wikipedia

Professor of Environmental Change Biology, David Bowman is exploring the relationship between fire, landscapes and humans. He co-authored the textbook 'Fire on Earth - an introduction' and is leading the pack globally in this complex field.
