Optical communication and networks Notes. It does this by varying the current flow through the light source. The two types of optical sources are light-emitting diodes (LEDs) and laser diodes. The optical source launches the optical signal into the fiber. The optical signal will become progressively weakened and distorted because of scattering,...

In the elements described as fiber optics light travels by virtue of this effect but it does so in a number of ways; monomode, multimode, step index, gradient index and so on. For lighting purposes or, to be more exact, to handle visible light, the standard type of fibers are the so-called multimode step index fibers.
