Agitation is a frequent symptom in nursing home residents. Agitation is a vague clinical term indicating motor or verbal activity not explained by the patient's needs or situation.

ASSESSMENT OF AGITATION IN THE NURSING HOME PATIENT - Alzbrain

Education about safe pain management will help prevent undertreatment of pain and the resulting harmful effects. Safety includes the use of appropriate tools for assessing pain in cognitively intact adults and cognitively impaired adults. Otherwise pain may be unrecognized or underestimated. Use of analgesics, particularly opioids, is the foundation of treatment for most types of pain.

Improving the Quality of Care Through Pain Assessment and ...

Nursing diagnoses represent the nurse's clinical judgment about actual or potential health problems/life process occurring with the individual, family, group or community. The accuracy of the nursing diagnosis is validated when a nurse is able to clearly identify and link to the defining characteristics, related factors and/or risk factors found within the patients assessment.
