Optical fiber communication gerd keiser. The dependence of the optical absorption coefficient on wavelength is shown in Fig. 6.3 for several photodiode materials. As the curves clearly show, it depends strongly on the wavelength. Thus, a particular semiconductor material can be used only over a limited wavelength range.

Fiber-optic communication is a method of transmitting information from one place to another by sending pulses of light through an optical fiber. The light forms an electromagnetic carrier wave that is modulated to carry information. Fiber is preferred over electrical cabling when high bandwidth, long distance, or immunity to electromagnetic interference are required.
