About This Calculator. This peer-reviewed online calculator uses the Pooled Cohort Equations to estimate the 10-year primary risk of ASCVD (atherosclerotic cardiovascular disease) among patients without pre-existing cardiovascular disease who are between 40 and 79 years of age. 1 Patients are considered to be at "elevated" risk if the Pooled Cohort Equations predicted risk is ≥ 7.5%.

Lipid profile or lipid panel is a panel of blood tests that serves as an initial screening tool for abnormalities in lipids, such as cholesterol and triglycerides.The results of this test can identify certain genetic diseases and can determine approximate risks for cardiovascular disease, certain forms of pancreatitis, and other diseases.. Lipid panels are ordered as part of a physical exam ...

Lipid profile - Wikipedia

The guidelines that cover the screening of patients for elevated serum lipid levels, and the treatment of patients with lipid abnormalities, rest on calculations of individual patients' risk for a future cardiovascular event. Broadly, risk factors are arbitrarily divided into three major ...

The National Cholesterol Education Program (NCEP) recommends that clinicians aim to reduce levels of non-high density lipoprotein (HDL) cholesterol as a secondary lipid-lowering target in their patients with residual elevation of serum triglyceride (TG) levels, defined as TG at or exceeding 200 mg/dL. The basis for this recommendation stems from a variety of epidemiologic and clinical trial ...

Managing Non-HDL Cholesterol

Non-high-density lipoprotein cholesterol (non-HDL-C) is the total amount of cholesterol contained in lipoproteins other than high-density lipoprotein (HDL). HDL is a particle that contains cholesterol, which is called HDL cholesterol or HDL-C. Non-HDL-C is calculated from the results of a lipid profile by subtracting the HDL-C result from the total cholesterol.
