An artificial neural network is a network of simple elements called artificial neurons, which receive input, change their internal state (activation) according to that input, and produce output depending on the input and activation.. An artificial neuron mimics the working of a biophysical neuron with inputs and outputs, but is not a biological neuron model.

life in a small town. move from small towns to larger cities. Although there are certain aspects of living in small town that I would appreciate such as clean air and less noise, however the urbanizing trend pretty much reflects my own preference for living in a big city rather than in a small town, because in my opinion the place one lives in plays more important role in one's life in terms ...
