This clinically oriented volume reviews the signs, symptoms and treatment of common ocular diseases and disorders in infants and children. Ocular disorders are of major significance as they often provide clues to the presence, not only of systemic diseases, but also of other congenital malformations.

General Discussion. Hairy tongue is an uncommon, benign condition that is also known as black hairy tongue or lingua nigra. It is characterized by abnormal elongation and blackish or dark brownish discoloration or "staining" of the thread-like elevations (filiform papillae) that cover most of the tongue's surface (dorsum linguae).

Small nuclear ribonucleic acid (snRNA) is a class of small RNA molecules that are found within the splicing speckles and Cajal bodies of the cell nucleus in eukaryotic cells. The length of an average snRNA is approximately 150 nucleotides. They are transcribed by either RNA polymerase II or RNA polymerase III. Their primary function is in the processing of pre-messenger RNA in the nucleus.

Introduction. Despite an estimated one-sixth of the world's men having been circumcised [], it has long been forgotten where or why this most intriguing operation began. The procedure has been performed for religious, cultural and medical reasons, although the last has only become fashionable since the rise of modern surgery in the 19th century.

LIFE IN THE WOMB. Individual life begins with conception by the union of the sex cells or gametes of the mother and father. The 23 chromosomes of the paternal sperm (male pronucleus) fuses with the 23 chromosomes of the maternal oocyte (egg or female pronucleus) at fertilization to create a single cell embryo or zygote containing 46 chromosomes. Thus, while the zygote receives cells from the ...
