1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal. That is, a weak input signal can be amplified (made stronger) by a transistor. For example, very weak radio signals in the air can be picked up by a wire antenna and processed by transistor amplifiers until they are strong enough to be ...

ECG, NTE, and SK are lines of universal replacement semiconductors. The underlying concept is that each ECG, NTE, or SK numbered device can replace a group of other semiconductors. For example, the single most popular ECG and NTE transistor, the 123AP, replaces thousands of different OEM and industry standard part numbered transistors. When the Delco DTS line of power transistors were ...
